

Restricted substances - Statement of Compliance

On behalf of TFL Ledertechnik GmbH we can confirm that the TFL leather chemical products comply with the European Union (EU) Directives and Regulations regarding restrictions on hazardous and toxic chemicals for use in normal leather consumer goods.

We are required by the EU Regulation 1907/2006 (REACH) and the former EU Commission Directive 2001/58/EC, to list all substances that are classified as toxicological or ecological risks clearly in section 2 or 3 of the Material Safety Data Sheet (MSDS). The international classification for transport and use is shown in sections 14 and 15 respectively.

The MSDS is the official legal document regarding individual chemical products supplied by TFL.

Many lists of restricted substances are specifications **for leather**. TFL provides guarantees for the leather chemicals it supplies. It should be noted that some of the restricted substances are dependent on the leather application process and storage conditions. The application of the products lies outside the scope of our control and therefore comes within the customer's sphere of responsibility.

This statement is made according to our present state of knowledge.
