For all: Spray Finishing with casein and waxes.

Wet-end highlights - for flexible premium crust

Scotchgard PM 4700

featuring excellent water-, oil- and stain repellent properties

- Imparts invisible, durable oil, water and stain repellency
- Ideally suitable for all naked leathers such as suede, nubuck and natural vegetable tanning
- leathers retain original look, feel and breathability
- best cost effective fluorochemical drum product
- best sustainable and favourable environmental profile
- Offers Scotchgard™ branding and licensing opportunities

Environmental: Not based on PFOA or PFOS chemistry. It is not made with and does not degrade to PFOA or PFOS.

CORIPOL® GF

Fatliquoring agent for soft nappa articles

- is the ideal companion fatliqur for shoe upper leathers
- universal fatliqur with pleasant touch and very good dyeability
- imparts high inner softness and grain tightness
- excellent electrolyte and storage stability that is pourable and easy to dilute

SELLATAN® SU-V gran. -

a well balanced synthetic replacement tanning agent, combining tanning power and dispersing effect

- Imparts a smooth and tight grain with excellent uniform filling properties
- Good light and heat fastness
- Is compatible with other synthetic & vegetable tanning agents and also with resins and polymeric retans
- Outstanding dyeing properties and responds well to buffing

Ecologically sound:

- SELLATAN SU-V gran. has a very low free-phenol content and no free formaldehyde
- It can be used to produce leathers, that comply the WHITE LINE specifications

Finishing highlights - for high quality fashion articles

Scotchgard PM 4701

featuring excellent water-, oil- and stain repellent properties

- Imparts resistance to salt staining, acid and alkali protection
- designed for water based finishing
- Offers Scotchgard™ branding and licensing opportunities
- Increases the wet-rub fastness of vulnerable leathers
- best sustainable and favourable environmental profile

Environmental: It does not contain alkyl phenol ethoxylate (APE) and it is not based on PFOA or PFOS chemistry. It is not made with and does not degrade to PFOA or PFOS.

RODA® bind 1101

water based protein binder for shoe uppers and leather goods

- contains selected waxes
- suitable for glazed look articles
- forms a medium-hard, satin and flexible film
- very good transparency and brilliancy

RODA® base RECO 4

is a highly sealing pre-bottoming for shoe uppers and lining leathers formulated by natural soft specialty resins

- suitable for both, full grain and snuff leathers
- good resistance to scuffing and brushing
- It reconstructs the grain surface
- it imparts a talc-like slippery touch
- It covers low and damaged grain areas and shallow defects
- Can be applied by roller coater, by spray guns or by padding

RODA® ground RECO 5

is a polishable shoe pre-bottoming suitable for full or slightly buffed grain leather formulated by natural specialty resins

- It provides leathers with a very natural look
- Excellent reaction to polishing and ironing
- Highly polishable
- No loosening of the treated grain
- Can be applied by spray guns or roller coater.
- High degree of black if coloured with the proper dyes and pigments
- Very good milling behaviour
- Naturalness of the treated grain
- Colour evenness and intensity
