**Hall E6, Stand B27**

TFL will be presenting several beamhouse, wet-end, and finishing products that help tanners to maximise their cutting yield. The main focus will be on the brand new product **Roda Care IPS** which was especially developed for intelligent upgrading with polishable finishing and increasing the useable area of the rawhide. It can be used on bovine hides, goat skin, and lamb skin. ★ Nowadays it is essential to cover surface defects efficiently and retain the natural character of the leather. TFL, a pioneer in finishing upgrading technologies, has further developed the well known **TopCare System**, which helps tanners to produce top quality leather from low quality crust in order to enhance the cutting yield. The TFL TopCare System not only treats small to medium sized defects, but it also covers the entire area with a thin homogeneous coat. ★ TFL provides solutions for every process step, to name a few: Beamhouse – **Sellatan PA** is a pickle acid with excellent cost-effectiveness for low salt pickling. ★ Wet-end – Maximise your cutting yield and standardise wet-blue of different quality by the combining of **Sellatan AR liq.** with **Sellasol SF**.
